

IST 652: The Final Project

Produced By:

Jonathan Durbin & Patricia Meadows

The daring
adventure of two
students looking
to explore Movie
and TV Show
offerings from
online platforms
that have taken
too much of their
time.

Prepping the Data

Cleaning:

Step 1: Download the CSV files to our local computers

Step 2: Iterate through each raw file reformatting and removing any rows that cannot be saved, adding the platform for the file, and rewriting them to a cleaned folder on our local computer.

Step 3: Create one file for each of the two types of CSVs available; combining all 6 platform's data.

Final Files:

Credits File: This is a DataFrame of 366,429 Actors and Directors.

Titles File: This is a DataFrame of 25,430 Movie and TV Offerings from all the providers.

Movies or TV Shows?

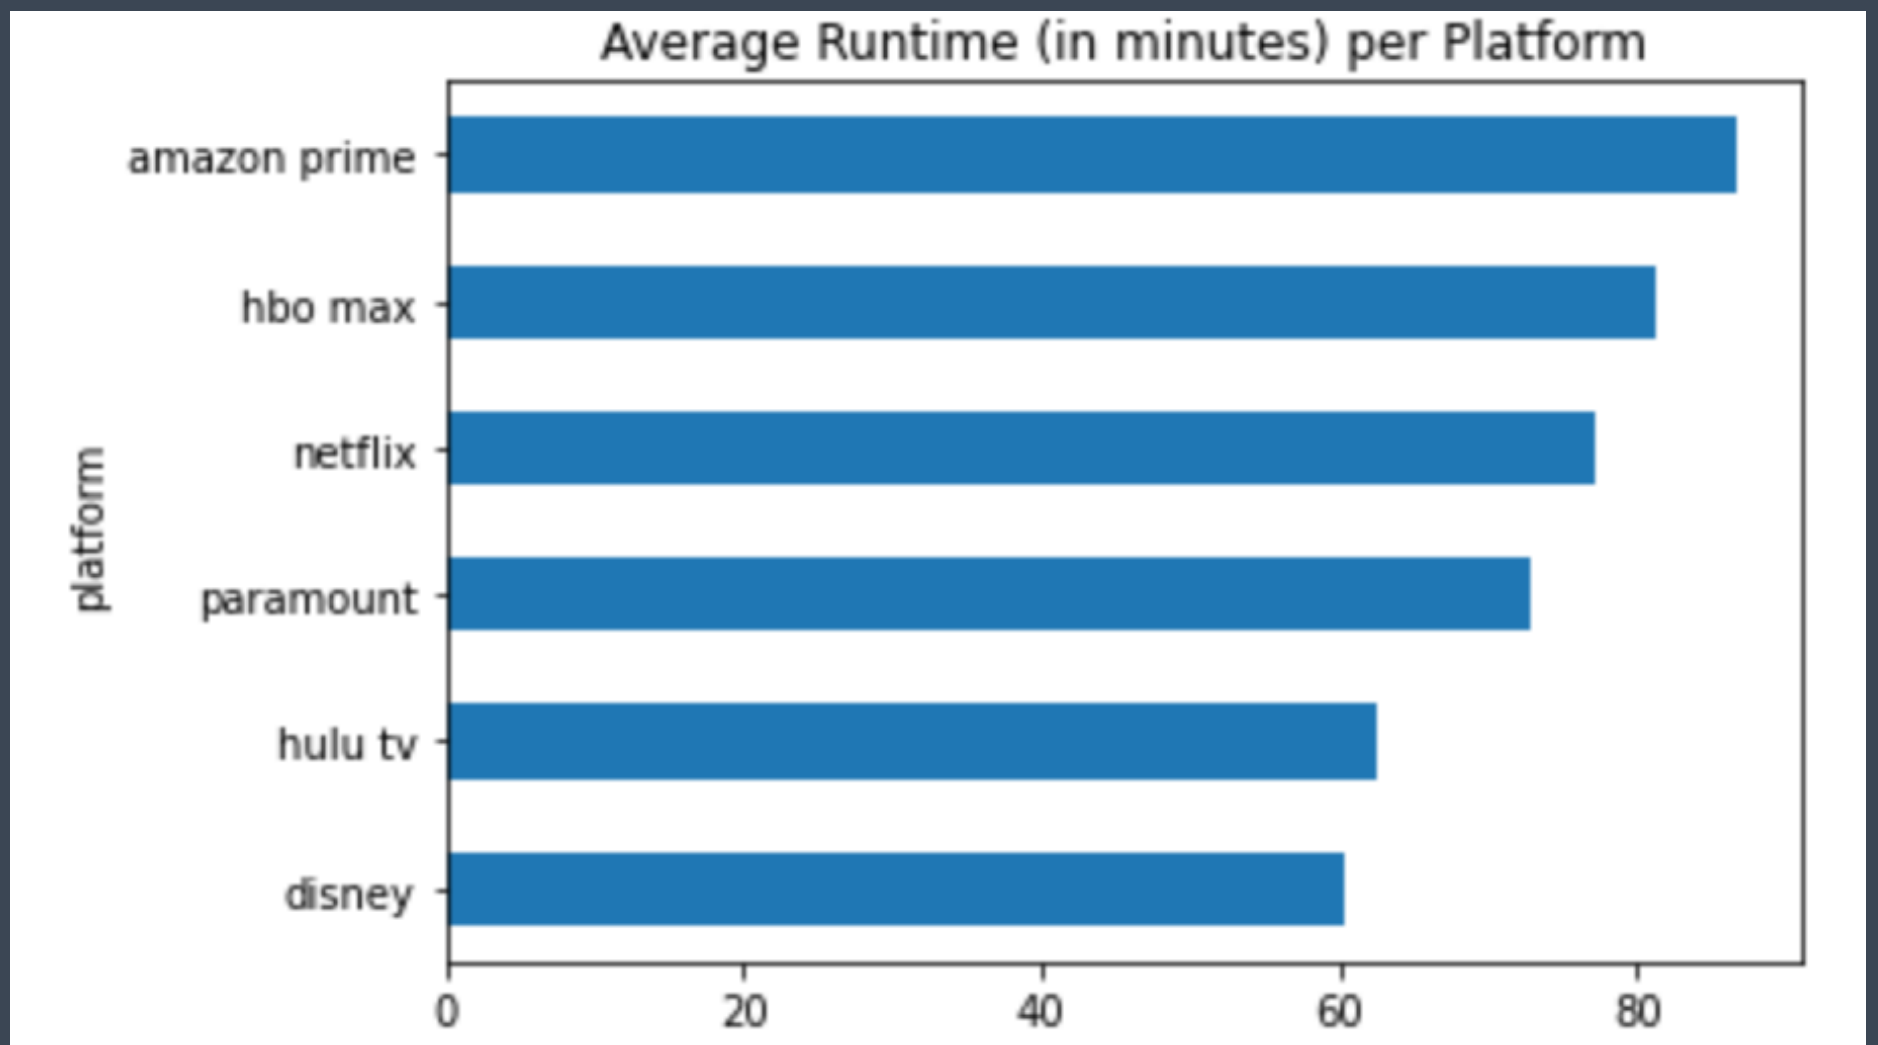

Netflix looks to have a great 2:1 ratio of Movies to TV Shows.

How do you find any movie on Amazon??

How Much Time Do You Have?

Disney tailors towards family and children content and Hulu also is known for quick watching so the shorter average runtimes make sense.

Amazon Prime is far more movie based so a longer average runtime is expected.

How Recent are the Offerings?

For the most part, all the platforms offer the same distribution of the age of their offerings.

Of note: the maximum release year in the data is 2022.

I Need Variety!

Amazon offers far more variety in their Movies and TV Shows.

I Need Variety! (Continued)

Genre Counts for all platforms:

drama	:	11608
comedy	:	8867
thriller	:	5011
action	:	4833

war	: 4.40
documentation	: 4.10

There is a difference in the popularity of genres per rating site.

Which Platform Has Good Offerings?

Average Rating per Platform

Nearly equal ratings for Amazon and Paramount.

Disney, Hulu, and Netflix are more highly rated on TMDb.

HBO Max is more highly rated on IMDb.

What Else?

Looking Beyond:

- * Use a sentiment analyzer to review the Descriptions for the offerings to see how the top Movies and TV Shows differ per platform.
- * Find more data on the monetary aspect of the platforms to see if it aligns with the IMDb and TMDb findings.
- * Research how so many offerings have been made after only 2 years of the 2020s.

That's all Folks!
